

Long-term Effect of Trade Liberalization on Income Distribution in Vietnam - DCGE Approach

Nguyen Manh Toan

Doctoral candidate , Kobe University (nm_toankobe@yahoo.com)

Using the Dynamic Computable General Equilibrium (DCGE) framework, this paper explores the links between trade liberalization and income distribution in Vietnam. The result reveals that in the long run the income gap between urban and rural households may become wider.

Analytical framework:

Determinants of **tariff reduction** on **welfare** of each household group through the DCGE model simulation

Study objective:

Whether trade liberalization could enhance **growth** and promote **equity**?
